Overview

Exploration

Figure 1 Project Locations

Yundamindera Project (Atticus earning 80%)

The Yundamindera gold project is located in the Eastern Goldfields Province of the Yilgarn Craton, 685 kilometres northeast of Perth and 205 kilometres north-northeast of Kalgoorlie. The project comprises two granted exploration licences, which are located adjacent to the historic mining centre of Yundamindera. Gold exploration carried out by a number of previous operators and Atticus has identified several areas of coherent gold anomalism (>50ppb Au & >100ppb Au) in near-surface soil sampling and RAB/aircore drilling that require follow-up work.

Previous exploration, including broad spaced RAB drilling, conducted in the northern parts of E39/1110, has identified at least two gold-in-regolith anomalies (>100ppb Au in RAB) that require further work. These areas have near surface regolith amenable to auger soil sampling and

consequently detailed, 200x50m spaced sampling has been planned for these prospect areas. Statutory approvals have been obtained and the sampling is scheduled for next quarter.

Following disappointing results from previous exploration of the E39/1249 area, this tenement will be surrendered in the following quarter.

Hartwell Bore Project (Atticus 100%)

The Hartwell Bore gold project is located in the northern parts of the Eastern Goldfields Province of the Yilgarn Craton, 575 kilometres northeast of Perth and 32 kilometres east-northeast of Leinster. The single tenement, E36/653, covers an Archaean greenstone sequence at the western margin of the southern Yandal greenstone belt.

There are two main gold prospects at Hartwell Bore, both of which have been extensively tested with previous RAB drilling and to a lesser degree with RC drilling. This drilling has been inconclusive in identifying primary sources to the extensive gold-in-regolith anomalism (>0.1g/t Au & >1g/t Au in RAB drilling). During the quarter, a detailed review of the previous drilling, along with a field visit to inspect the main prospect areas, were completed. This work has indicated that the significant gold-in-regolith anomalism at the Hartwell Bore North prospect has been well tested by the existing RC drilling and that no further work is considered necessary here.

At the Hartwell Bore South prospect, some further infill RAB/aircore drilling is required to better define the best of the existing gold-in-regolith anomalies. Several of these anomalies have been tested with RC, but apart from in one area, none of this drilling provides definitive tests and further drilling is required. It is also possible that the previous RC drilling at this prospect has been oriented in the wrong direction. Any further RC testing should be oriented towards the west or west-northwest so as to intersect the roughly north – south trends and possible southeast dip of potential gold mineralisation. Due to the depths required to properly test these RC targets, exploration programmes will be expensive and could be

considered high risk. Consequently, Atticus is considering whether to proceed with these programmes or joint venture the project to spread exploration risk.

Corporate

During the quarter, the Company continued to seek opportunities for further acquisitions that meet its objectives. Atticus remains committed to completing an acquisition that could become the major undertaking of the Company.

Competent Person Statement

The information in this report that relates to Exploration Results is based on information compiled by Greg Jorgensen, a self-employed, Kalgoorlie-based Consulting Exploration Geologist, who is a Member of The Australian Institute of Geoscientists. Mr Jorgensen has sufficient experience, which is relevant to the style of mineralisation and type of deposits under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2004 Edition of The JORC Code. Mr Jorgensen consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.

Further Disclosure

Mr Jorgensen is a Director of BrilliantGold Pty Ltd, an unlisted, Kalgoorlie-based mineral exploration company, which currently holds 100% of the Yundamindera Project. Atticus Resources Ltd is currently earning an 80% interest in this project.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
